

# 6 TOP REASONS

## WHY JAVA DEVELOPERS USE ARTIFACTORY

JFrog Artifactory is the universal repository manager for all of your artifacts: dependencies, binaries, and configuration files. Here's why Java and Kotlin developers find they can't do without it.

### 01 MAINTAIN A SINGLE SOURCE OF TRUTH FOR BINARIES

*"If I had to install a Yum repository and a Nuget repository and a Node.js npm repository I would've had to work with different companies. Just being able to do it all in Artifactory, nothing beats that."*

– Consulting Member of Technical Staff, Oracle

Most enterprises use  
**12 or more**  
distinct package types

**92% of apps**  
use open source code

### RELIABLE AND CONSISTENT ACCESS TO REMOTE ARTIFACTS 02

*"Imagine a couple thousand developers going through a single proxy to be able to access, say, Maven Central. That unnecessary traffic is now negated. We're able to build our solutions without going outside of our firewall."*

– Technology Architect at Kroger

### 03 TRACE DEPENDENCIES IN EVERY BUILD

*"A big bonus for our developers is build metadata – when log4j hit, it was the easiest thing to generate a report of what apps had that vulnerable dependency, fix it, and we were good to go."*

– DevOps Service Owner, Bendigo and Adelaide Bank

**Over 5 million**  
artifacts  
per organization

## 04 FULL INTEGRATION WITH YOUR BUILD ECOSYSTEM

*"Our technology choices aren't ever limited by Artifactory."*

– CI/CD Lead at Monster

Less than  
**50% of SRE hours**  
should be spent  
on operations

Median of  
**130 security breaches**  
each year at a typical firm

## PROTECT YOUR SOFTWARE SUPPLY CHAIN 05

*"Anything developers will download, install, update or store comes from the single source of record. This takes a lot of my worries away, because it's baked into the SDLC. JFrog is secure by default so we have full confidence in what we're distributing."*

– Sr. Manager, FinTech Enterprise

## 06 A UNIVERSAL, END-TO-END SOLUTION FOR ALL BINARIES

*"We no longer have 20 different DevOps teams doing things in 20 different ways with 20 different toolsets and processes. Our DevOps teams now work in a streamlined, governed and secure way, while being hyper productive and agile."*

– Sr. Manager, FinTech Enterprise

Over 70%  
of the Fortune 500  
rely on JFrog

Read more to learn all 12 ways that Artifactory, the binary repository manager at the heart of the JFrog DevOps Platform, gives Java developer teams the tools to succeed from end-to-end.

<https://tinyurl.com/mmbkh2th>

The JFrog Platform is available at multiple subscription levels for on-prem or as a managed service in the cloud. Whether you're a small development team for internal applications or a global enterprise delivering secured software to the edge, JFrog has the right set of solutions for you.
