

Secure Every Release with Continuous Governance

JFrog AppTrust makes governance a natural output of your software supply chain, so every release ships with proof, not promises.

THE CHALLENGE

Manual Governance Breaks Under AI-Driven Development and Regulations

AI agents now commit code, open PRs, and deploy to production with no humans in the loop. Boards and regulators demand auditable proof of software integrity at a volume and velocity manual governance cannot track, resulting in release delays and personal legal liability.

THE SOLUTION

Continuous Governance at Scale

JFrog is the only platform that is a System of Record for all artifacts, with a governance layer engineered in. AppTrust unifies evidence, enforces automated policy gates, and ensures only verified, trusted software reaches production.

Automated Governance & Active Enforcement

Accelerate delivery by enforcing Policy-as-Code gates and pre-mapped compliance frameworks that physically block non-compliant software before it reaches production.

Zero-Touch Compliance & Immutable Evidence

Prompt to release traceability captures signed evidence from every agent interaction, commit, PR, approval, and security scan automatically, eliminating manual audit assembly.

Always-On Risk Visibility & Post-Release Governance

Every application maps to an owner and blast radius. Every deployed version stays continuously monitored post-release. Expired versions are no longer actively governed.

Eliminate Compliance Gaps and Avoid Regulatory Penalties

Manual governance fails against AI-driven volume, creating legal exposure.

Financial Impact

New mandates like the EU Cyber Resilience Act (CRA) impose impact up to 2.5% of global revenue for non-compliance.

Operational Strain

47.9% of CISOs identify manual evidence gathering as a top operational challenge when implementing new regulations.

Market Access

Compliance is now a prerequisite for revenue. Failure to meet a specific regulation can physically block your ability to sell into a certain market.

Standardize Trust Across Your Software Supply Chain

Give every team a single source of truth for software integrity.

Engineering

Ship at agent speed. Policy gates replace manual approvals, so compliance becomes a by-product of delivery, not a tax on it.

AppSec

Set policy once. Every release follows it. Evidence collected automatically at every stage, with risk mapped to business impact instantly.

CISO

No gap between what shipped and what you can prove. Continuous evidence, board and audit-ready answers in minutes.

CAPABILITIES

Application Context & Insights

Transform artifacts into application entities that bind ownership to business criticality. Track DORA delivery metrics, map blast radius of production exposures, and continuously monitor trusted releases for new CVEs.

Customizable Policy-as-Code Gates

Know your policies work before they go live. You can write and dry-run them against real evidence inside your System of Record, then reuse them as templates to scale governance across your organization.

Pre-Mapped Compliance Frameworks

Apply CRA and NIST SSDF as Policy-as-Code with one click. Every control is mapped and enforced automatically, with real-time coverage scoring so CISOs and their security teams get audit-ready proof in minutes, not weeks.

Ecosystem-Wide Tooling Integration

Accelerate compliance using out-of-the-box integrations with GitHub, ServiceNow, Sonar and +10 native evidence partners. AppTrust unifies multi-vendor security and quality signals into one platform to eliminate tool fragmentation.
