

Governance by the Numbers

Your pipeline is moving fast.
Your governance isn't keeping up.

Here are key data points you must address to bring your software governance up to speed.

Biggest Time Drain

58%

of DevSecOps teams say security governance and policy enforcement are two of their most time-consuming tasks. It's not vulnerability scanning, not remediation, but governance that's really taking up your time.

Visibility Gap

59%

of organizations report having full provenance visibility.

48%

of organizations need a week or more to generate proof of software compliance. Visibility and proof of compliance are both essential for overcoming audibility lag.

Manual Audit TAX

48%

of CISOs list "evidence collection" as their top operational challenge when implementing new security frameworks. Top engineers become digital archaeologists trading innovation for evidence hunting.

Cost Of Complexity

77%

of companies say compliance complexity negatively impacts growth. Manual compliance is a commercial roadblock. Evolving your governance model is now a business imperative.

Effect On New Business

35%

of enterprises conduct compliance audits specifically to win new business. Governance isn't just a cost. It's a competitive edge that helps close deals.

Meeting The Challenge DevGovOps

Automatic, continuous governance engineered into the development lifecycle with immutable attestations built into every release, not chased down after the fact.
